Formula to Determine Carrying Capacity

The following formula is used to determine the carrying capacity of commercial loads and large vehicles, given a weighbridge is not available.

Gross vehicle mass-tare = Maximum Carrying Capacity

Carrying Capacity x \$190.00/t = fee/\$

Example: Gross vehicle mass = 20t & Tare = 10t

Carrying Capacity = 10t x \$190.00 = \$1900.00 fee

Always remember to secure and cover your load

To ensure optimum site cleanliness and the safety of other users, please use this facility appropriately. If you are unsure of where to place your waste or where to place recycling items please do not hesitate to ask for assistance from one of our trained and friendly staff.

How the cost of your load is assessed

The size of your trailer load is assessed and charges applied at the operator's discretion.
